**MORE THAN JUST FEATHERS & DOWN**

# FILLING MATERIALS

For over a century, Molina has been researching, producing and promoting **high quality materials** to meet the demands of an ever-evolving market. Our materials are used as high-performance and eco-friendly filling materials in apparel, sofas and bedding products.

## **Feather & down**

Feather and down processing is Molina's core business. During more than one hundred years in this market segment, we've established reliable and fully traceable supply chains for our plumage materials. We're capable of sourcing the best quality duck, goose and recycled plumage both in Europe and Asia. Our multiple production locations help to provide the best service to customers, delivering the same quality standards, with short lead times, all over the world.

## **Down alternatives**

Technological innovation integrated the production of high-tech filling materials such as polyester fiber and microfiber, which are valid alternatives to down and feathers. Molina offers a wide range of synthetic products that are used and appreciated worldwide as eco-friendly, healthy and performant.

# DOWNPROOF FABRICS

We have set up a **textile department**, specialized in the finishing of feather and downproof fabrics, which allows us to offer our customers different processes for our fabrics. We are continuously **improving and growing**, following the most advanced technologies and automations. We internally perform flame-retardant and water-repellent treatments. A special and innovative tool allows us to control the air permeability of the fabrics with 25 measurements per meter to ensure total uniformity.

# BEDDING PRODUCTS

Molina has an internal department equipped with cutting, sewing and filling lines, to produce bedding items such as pillows, decorative pillows, duvets and quilts. Our finished products are all **made in Italy** and distributed to the top players in home textile and hospitality.

All processes have maintained the characteristic of **absolute craftsmanship** over time. Each product is worked and packaged by hand, striving to achieve the best possible result. We are at our customers' side at every relevant stage, from advice on the choice of materials to guaranteeing control and ensuring complete traceability, supporting our work with the most important **certifications**.
